## SMART FACTORY AS A SERVICE

### A manufacturing service producing products customers dream about

Now you can provide your products for your customers made with the customized design, material and size, and quickly buy at the price of mass production. Smart Factory as a service also offers a digital experience through a front-end system for better communication with your customers.

## HOW TO START

- 1. QuickScan product portfolio that can be redesigned**  
Analyse work-flow
- 2. Design your production site**  
Design the components for your container
- 3. Product Design**  
Design for additive manufacturing your products
- 4. Delivery of your production site**  
Everything is shipped to the factory
- 5. Installation and automatic calibration**
- 6. Programming by teaching and training the production operator**
- 7. Rapid turn key completion!**

## QUICKSCAN

Is there any product that can be redesigned for additive manufacturing? Is there a novel advanced manufacturing technology that finally allows automation of manual production tasks at your site? The feasibility depends on the type of products, complexity of the process, and logistic aspects. Equally important factors are the number of production hours, speed, and variation in the objects and process. We have developed a QuickScan to quickly access the feasibility of additive manufacturing and robotization at your site.

## YOUR OPPORTUNITY

Are you convinced that at least one product within your company's production portfolio could use the help of even the most basic additive manufacturing technologies? Then we are the right choice. If you're finding it difficult to assess if this idea fits your organization, or you're unsure if it's even feasible, come and talk to us. We are prepared to execute an initial workshop, together with our additive manufacturing tools and experts in order to give you a more realistic feeling for our product.
